IONIC 3 DEVELOPER

DESCRIPTION FOR PROFILE OF FREELANCE DEVELOPER

IRTECH MOBILE & WEB SOLUTIONS

www.ir-tech.ch

About IRTECH

IRTECH is a mobile & software development company from Schaffhausen, Switzerland. We are mainly specialized on BPM-Apps, but provide also expertise in GPS-based apps and integrated Solutions.

We see the hybrid applications as the future and hence provide mainly hybrid development.

About the freelancing Role

We are on the lookout for a freelancer for various projects. Right now we are working on a big international project in the sport event sector and therefore we are looking for an Ionic expert to implement various features within the existing application.

This role is not for a one-time Project but targets a longtime partnership.

Requirements

Following a couple of requirements for various IRTECH Projects:

- High sourcecode quality (Copy & Paste Code is not welcome)
- Knowhow in GPS Functionalities (Geolocation, Background Geolocation, ..)
- Knowhow in Cordova (we rely heavily on Ionic Native)
- Proficiency in TypeScript (JavaScript Knowledge not sufficient, we rely heavily on TypeScript Features)
- Git (we heavily use Git in our Development Processes)
- Sufficient in English language

Information about Workflow

We split our products into various modules to allow a proper separation of tasks. The workflow for freelancers is usually:

- Project management assign a complete feature / use case to the Freelancer with detailed description of it
- Freelancer creates an implementation concept
- Freelancer discusses implementation concept with project management
- Freelancer does the implementation
- Project management does code review & functional testing
- IRTECH pays for that particular feature
- Freelancer is responsible for bugs in that particular Feature / Module

See below the process visualized as BPMN Diagram.

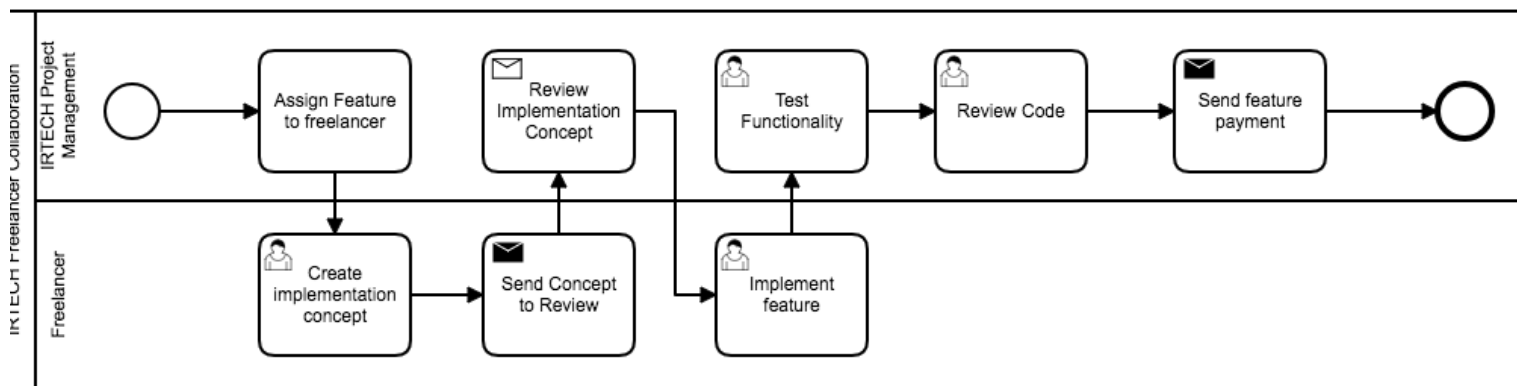

Figure 1 Process overview

Payment

Because we split the development process into single features, we pay based on Features.

Freelancers usually create an offer for a specific feature. When he delivers in the quality needed, he will get paid immediately, even if the project is not finished yet.

Application

To apply for that freelance position, send a short description to info@ir-tech.ch including:

- Short description about you (where are you based, how many years of experience)
- **Sourcecode of Ionic3** Applications (GitHub, or attachment)
- How much you charge for an hour

If you can't deliver sourcecodes of applications because of NDA's, just deliver parts of it or another project.
